GET FLEET MANAGEMENT SYSTEM

– intuitive and smart solution for optimized battery and charger systems

Micropower believes that having one fleet management system for both, batteries and chargers, is easier for the user and better for the business. The GET fleet management system is designed to optimize electrical fleets through smart algorithms and routines. The system is designed by engineers with decades of experience from the industrial battery and charger industry.

The GET System can detect issues and deviations in an instant, monitor, optimize usage and operational quality. Most Micropower devices are compatible with the GET system. The data they collect is processed and turned into insights and features, helping our customers lower their costs and increase efficiency.

Smart Algorithms

Micropower's dedicated Software and Solutions team is focused on bringing value to data. With extensive experience in Data Science and AI they continue to develop new and innovative services such as Active Dynamic Power Limitation, State of Health predictions and Remaining Lifetime Assessments.

Intuitive and Easy to Install

Most Micropower devices are compatible with the GET System. They are delivered with smart, built-in features such as BBC and DPL and they start collecting data from the first charging cycle. Connecting them to the GET System is easy and wireless with no need for long installation times or wiring.

Integration

The insights and features from the GET System can be accessed from our web portal and also through API:s making it possible to seamlessly integrate them with your systems. The GET System can also integrate with external sources, bringing added value to our customers. The GET System is constantly evolving with several releases each year. We put a lot of focus in building the best and most intuitive user experience on the market. Contact your Micropower Sales representative for more information

EFFICIENT SUPPORT

Support your customers remotely, minimizing time consuming service trips.

CROSS SELL

Discover new cross sell opportunities with add on services and hardware.

PREVENT WARRANTY ISSUES

Catching issues early, preventing damage and future warranty claims.

FAST ROI

Better control and utilization guarantees a fast ROI.

24/7 ACCESS

Access to your battery and charger fleets, wherever you are.

PROACTIVE

Being proactive and well informed increases the customer experience.
